2015/06/01

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 003

Event: 70137**New Program and Version:** IMPSQ1 (7.0.047)**New Program and Version:** IMPSQF (7.0.047)

Release Notes read as follows:

--- Synopsis ---

When you ran the Sales Order balance and it attempted to balance inventory from multiple companies and one of the companies has a company id longer than 1 character an error could be shown.

--- Details of Problems Experienced ---

When you ran the Sales Order balance and it attempted to balance inventory from multiple companies and one of the companies has a company id longer than 1 character an error could be shown.

--- Changes Implemented ---

The SQL architecture has been changed to ensure that all relevant SQL statements handle company id's longer than 1 character. Note for developers: this affected the SQL-DELETE-ROWS function when a prior SQL-DEFINE-DELETE-FROM function had been performed that contained a %databaseXXXX variable where XXXX was a 2, 3 or 4 character company id.

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 003

Event: 69338**New Program and Version:** IMPJNS.IMP (7.0.007)**New Program and Version:** IMPUSN (7.0.006)**New Program and Version:** TYPEDEF.WRK (7.0.)

Release Notes read as follows:

--- Synopsis ---

There is a requirement for SYSPRO Administrator to be able to end SQL Sessions that are blocking other SQL Sessions.

--- Reason for enhancement ---

If a SQL process is blocking another SQL process, SYSPRO will hang and no further action can be taken until the blocking process is ended.

--- Details of enhancement ---

"IMPUSN - Admin Display Users Logged in Detail" now include a listview displaying a list of blocking/blocked SQL Sessions and the ability to kill those SQL Sessions.

--- Where would I see this change? ---

Logged in Users Query both contains a separate listview displaying information regarding 'SPID' (SQL Session ID) created by each logged in SYSPRO user as well as any locks that these processes have attracted. Additionally, these processes can be ended if required.

Release Notes for SYSPRO 7 Update 1 Port 003

Event: 69646**New Program and Version:** WIPTJB (7.0.070)

Release Notes read as follows:

--- Synopsis ---

When you invoked the Job Creation business object, and created subjobs, the job descriptions of the subjobs were not being correctly updated to be in line with core SYSPRO

--- Details of Problems Experienced ---

When you invoked the Job Creation business object, and created subjobs, the job descriptions of the subjobs were not being correctly updated to be in line with core SYSPRO.

--- Changes Implemented ---

This has been corrected so that when you invoke the Job Creation business object, and create subjobs, the job descriptions of the subjobs are now being correctly updated to be in line with core SYSPRO. If a blank job description or the stock code description is passed to the business object, for the parent, the all subjobs will use the stock description as the job description.

Release Notes for SYSPRO 7 Update 1 Port 003

Event: 69393**New Program and Version:** IMPBP1 (7.0.086)**New Program and Version:** SYSPROINTEROPHOSTCONTROL.DLL (7.0.001)**New Program and Version:** SYSPROINTEROPHOSTCONTROL40.DLL (7.0.001)

Release Notes read as follows:

--- Synopsis ---

Sometimes the size of parameters being passed to a .NET User Control can cause SYSPRO to crash. This applies to the ExecuteScript method and the DoRefresh event.

--- Changes Implemented ---

The internal mechanism for transferring data from a User Control to SYSPRO has been changed from being a string value to being transferred by file. Thus, the Interop DLL (SYSPROInteropHostControl40.dll) now creates a temporary file of unlimited sized and passes the name of the temporary file to the SYSPRO system. The file is then read into memory as a string value parameter and the temporary file is deleted.

Release Notes for SYSPRO 7 Update 1 Port 003

Event: 69234**New Program and Version:** MRPP4A (7.0.072)**New Program and Version:** MRPP4B (7.0.067)**New Program and Version:** MRPREV.PRO (7.0.)**New Program and Version:** MRPREV.WRK (7.0.)**New Program and Version:** PORPM9 (7.0.051)**New Program and Version:** PORTRR (7.0.009)

Release Notes read as follows:

--- Synopsis ---

When creating a requisition via the MRP Requisition Review, the requisition is not automatically approved when automatic approval can occur below a certain value

--- Details of Problems Experienced ---

When creating a requisition via the MRP Requisition Review, the requisition is not automatically approved when automatic approval can occur below a certain value.

--- Changes Implemented ---

The MRP Requisition Review has been changed so that, if the MRP user has a maximum auto approval value set and the approval checking is done at user level, the requisition can now be automatically approved. Other conditions which prevent automatic approval: 1) If budgets are required and the budget is exceeded 3) If mandatory user codes are checked in routing and the user code is not $\frac{1}{2}$ MRP $\frac{1}{2}$. If a requisition line has been automatically approved then the requisition will be routed using the routing information against the requisition user $\frac{1}{2}$ MRP $\frac{1}{2}$. Only the routing options defined against the requisition user can happen. Checks done: 1) If the requisition setup option - Record approvals has been switched on and the requisition route on to user against the requisition user $\frac{1}{2}$ MRP $\frac{1}{2}$ is valid then the requisition will be routed to this user. If this requisition user then has a valid user defined against route to user to create p/order then the requisition will be routed again, this time to the user to create the p/order. 2) If the requisition setup option - Record approvals has not been switched on or the requisition route on to user is spaces against the requisition user $\frac{1}{2}$ MRP $\frac{1}{2}$ then the requisition will be routed to the user to create the p/order against the requisition user $\frac{1}{2}$ MRP $\frac{1}{2}$ if valid. An error has also been corrected whereby if a buyer is mandatory on creation of a requisition or purchase order and a buyer has not been selected an error message of Buyer/Errors is loaded in the Status/Invalid column and the record cannot be created.

Release Notes for SYSPRO 7 Update 1 Port 3

Event: 68946**New Program and Version:** _EV_68861 (7.0.)

Release Notes read as follows:

--- Synopsis ---

For SYSPRO POS a setup option is needed to allow users to select warehouses for which Inventory Query must be run against.

--- Details of Problems Experienced ---

When running Inventory Query in POS enhancements is required to set the warehouses for which the query must be run. For this a new setting has been added in SYSPRO POS under Setup > Branch Settings > Warehouse > Inventory Query. This setting is independent from the Permissions Indicator and can be set for denied warehouses as well. On the Inventory Query screen the functionality for the "Filter warehouse" button has also been changed to list only warehouses that 1) was setup for Inventory Query and 2) when a stock code has been specified on the Inventory Query screen - only warehouses that stock the particular stock code

--- Changes Implemented ---

Added a setting in SYSPRO POS under Setup > Branch Settings > Warehouse > Inventory Query allowing the user to set the warehouses for which to run Inventory Query. Also changed the filter warehouses on the Inventory Query screen to filter warehouses on: 1) per the Inventory Query settings and 2) warehouses that stock the stock code specified on the Query Inventor screen

Release Notes for SYSPRO 7 Update 1 Port 3

Event: 68725**New Program and Version:** SRSPRT (7.0.058)

Release Notes read as follows:

--- Synopsis ---

SRS document Printing - large fields will truncate at 300 characters if the value contains ']'

--- Details of Problems Experienced ---

When printing a notes field that can be longer than 300 characters the field will be truncated at 300 characters if it contains a closing square bracket ']'. This was caused by a fix done on event 14114 where the crystal XML parser would fail if the ']' is the last character in the string and the value was enclosed in a CDATA section. On event 14114 SRSPRT was changed to call a common routine to replace character entities (&, < and >) so that the value was not enclosed in a CDATA section. This common routine only catered for 300 characters.

--- Changes Implemented ---

SRSPRT was changed to not call the common routine with the limit of 300 characters and it will now check the full length of the field for invalid XML character entities.

Release Notes read as follows:

--- Synopsis ---

When you added a sales order in SO Entry Express using reserve rather than ship, you found that the trade promotions free goods lines were moved to back order rather than reserved.

--- Details of Problems Experienced ---

When you added a sales order in SO Entry Express using reserve rather than ship, you found that the trade promotions free goods lines were moved to back order rather than reserved.

--- Changes Implemented ---

The Sales Order Express program has been changed to process reserved stock correctly. Any off-invoice and accrual promotions where the sales order line is reserved are calculated on order entry as if the stock were in back order. A sales order line added as a result of a free goods promotion is placed in reserve when the parent line is reserved, and the relevant Trade Promotions option to ship free goods is selected.

Release Notes for SYSPRO 7 Update 1 Port 003

Event: 68342**New Program and Version:** PORP93 (7.0.024)

Release Notes read as follows:

--- Synopsis ---

The Requisition build purchase orders program had no means to include non-stocked lines on the same suggested purchase order as stocked lines when restricted to single warehouse.

--- Details of Problems Experienced ---

The Requisition build purchase orders program had no means to include non-stocked lines on the same suggested purchase order as stocked lines when restricted to single warehouse.

--- Changes Implemented ---

The Requisition build purchase orders program has been changed to include an associated warehouse for non-stocked requisition lines so that they can be placed on the same suggested purchase order as stocked lines when restricted to single warehouse.

Event: 68118**New Program and Version:** ARSP73 (7.0.009)**New Program and Version:** IMPSTD (7.0.106)**New Program and Version:** STDBEGIN.PRO (7.0.)**New Program and Version:** WWLINK.WRK (7.0.)

Release Notes read as follows:

--- Synopsis ---

A/R Settlement Discount Note was not correctly printing the discount credit/debit notes correctly if the presentation length was anything less than 15 and AR Invoice numbering is alphanumeric.

--- Details of Problems Experienced ---

A/R Settlement Discount Note was not correctly printing the discount credit/debit notes correctly if the presentation length was anything less than 15 and AR Invoice numbering is alphanumeric. This was due to the fact that whilst these keys use the AR Key settings of presentation length and suppress zeros but it was incorrectly trying to use the key type (alphanumeric) when in fact these keys are always numeric.

--- Changes Implemented ---

The A/R Settlement Discount Note print has been changed to correctly edit and output the discount credit/debit notes according to the AR Invoice presentation length.

Event: 68945**New Program and Version:** IMPKEY.IMP (7.0.)**New Program and Version:** QOTP21 (7.0.026)**New Program and Version:** WIPPJC (7.0.006)

Release Notes read as follows:

--- Synopsis ---

When you ran the Quotation Purchasing Review then entered an invalid requisition number, an incorrect message could result

--- Details of Problems Experienced ---

When you ran the Quotation Purchasing Review then entered an invalid requisition number, an incorrect message could result. Secondly, it was possible to enter an incorrect requisition number, and this would be saved. In addition, when you ran the WIP Classification Maintenance program, an incorrect message was shown when you entered job prefixes and suffixes that exceeded the input field.

--- Changes Implemented ---

The Quotation Purchasing Review has been changed so that entering invalid requisition numbers produces the correct error message. It is also no longer possible to save invalid requisition numbers in the Quotation Purchasing Review program. The WIP Classification Maintenance program has also been changed so that the correct message is shown when you enter job prefixes and suffixes that exceeded the input field.

Release Notes read as follows:

--- Synopsis ---

e.net New Return Merchandise List Query Business Object

--- Reason for enhancement ---

e.net developers also need to be able to access the various Return Merchandise features without using SYSPRO.

Information on the number and status of Return Merchandise Authorizations in the system is essential

--- Details of enhancement ---

The S/O List of Return Merchandise Authorizations Query business object returns a list of selected Return Merchandise Authorizations according to a range of selection criteria. Return Merchandise Entries can be selected according to their current status. The following filters can be applied to restrict the amount of data returned: All, Range or Single Return Merchandise Authorizations -All, Range or Single customers -All, Range or Single geographic area -All, Range or Single branches- All, Range or Single customer classes -All, Range or Single entry date -All or Single user defined field. The schema and sample XML instance document as well as a sample XML document displaying the information returned have been published as part of the SYSPRO e.net solutions Business Objects Reference Library.

--- Where would I see this change? ---

Schemas and sample XML instances are available in the SYSPRO e.net solutions Business Objects Reference Library.

SYSPRO 7 Update 1 Port:003**Legend:**

- 5 - Critical.** This could mean that the software will cause an unrecoverable data loss, it may have a serious financial implication to the customer, there may be a security issue, or there may be legal implications.
- 4 - Serious.** This means that there is a remote chance of data loss, a remote chance of a financial implication to the customer, or that there is a possibility that it will affect many customers.
- 3 - Error.** There is an error in the functionality of the program, but this will not stop the customer doing any major part of their business.
- 2 - Minor Error.** There is a minor error in the functionality of the program, and this will not stop a customer doing any part of their business. This is likely to just be a cosmetic problem.
- 1 - Enhancement.** This is an enhancement to the system.
- 0 - Ease of use.** This may be something that could make life easier for the customer, or a change in the user interface for consistency or to improve usability.
