71164   **Perception: 4**

2015-09-09
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 7
Event: 71164
New Program and Version: IMPNLS (7.0.022)
Release Notes read as follows:

--- Synopsis ---

When you attempt to test the stock code unit of measure factor you may receive an incorrect message when using a non-English language and having a 1000 separator as a space character.

--- Details of Problems Experienced ---

When you attempt to test the stock code unit of measure factor you may receive an incorrect message when using a non-English language and having a 1000 separator as a space character.This was due to incorrect parameterization of a numeric field with embedded spaces.

--- Changes Implemented ---

The language translation parameterization logic has been change to handle 1000 separator spaces characters.

71036   **Perception: 4**

2015-09-23
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 7
Event: 71036
Release Notes read as follows:

--- Synopsis ---

Changing qty on POS screen throws exceptions

--- Details of Problems Experienced ---

When you changed the qty on the POS screen POS would show exception. Please see event 71036 as it is the same problem

--- Changes Implemented ---

I have fixed the program as it was using the new autocomplete box for the description google type search. It will now check if the textbox is in fact a text box or a auto complete box because both the qty field and the input field use the same method.

Release Notes read as follows:

--- Synopsis ---

In SO Entry Express, if you changed Order UOM after entering order quantity, the quantity to ship in stocking UOM was not refreshed.

--- Details of Problems Experienced ---

In SO Entry Express, if you changed Order UOM after entering order quantity, the quantity to ship in stocking UOM was not refreshed.

--- Changes Implemented ---

The SO Entry Express program has been changed to refresh stocking quantity to ship column after order UOM is changed.

67246   **Perception: 4**

2015-09-28
Ported for SYSPRO 7
Release Notes for SYSPRO 6.1 Issue 001 SP1 Port 59
Event: 67246
New Program and Version: IMP040 (7.0.292)
New Program and Version: IMP040LT.PRO (7.0.)
Release Notes read as follows:

--- Synopsis ---
When you create a transfer from a Supply chain transfer order then under certain circumstances the movement entry for the transfer out was not created.

--- Details of Problems Experienced ---
When you create a transfer from a Supply chain transfer order then under certain circumstances the movement entry for the transfer out was not created. For this to occur multiple bins needed to be switched on but off for the source warehouse and the stock code needs to be serialized with the option to only record serials during order entry.

--- Changes Implemented ---
Sales Order entry has been changed to take into account the fact that multiple bins are switched off for the source warehouse and the item is serialized with the option to capture serials in order entry and correctly create the dummy multiple bin row. The multiple bin row in SorDetailBin is then used at the time of creating the transfer to create the inventory movement row.

Event: 71855
New Program and Version: SORTCLDOC.XML (7.0.)
New Program and Version: SORTCLDOC.XSD (7.0.)
Release Notes read as follows:

--- Synopsis ---
e.net: The schema for SORTCL business object did not cater for multiple entries.

--- Details of Problems Experienced ---
The schema for SORTCL business object did not cater for multiple entries.

--- Changes Implemented ---
The schema for SORTCL business object has been changed to cater for multiple entries.

71854   **Perception: 3**

2015-09-28
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 7
Event: 71854
New Program and Version: IMPFRO (7.0.187)
Release Notes read as follows:

--- Synopsis ---
The data underlying a form field in the OnBeforeChange event is still being applied even if this event is being set to 'false'.

--- Details of Problems Experienced ---
If you have a VBScript that tests the OnBeforeChange event, and you make the event be 'false' (indicating to undo the change to the form), then while the change is visibly undone (as indicated on the screen), it is possible that the data is still applied to the logic of the program. As an example, if in INVPST you set the OnbeforeChange event to be false when changing the LONG DESCRIPTION, then the changed value is still saved if you save the stock code.

--- Changes Implemented ---
The system has been corrected.

71848   **Perception: 3**

--- Changes Implemented ---

This has been corrected so that in In Good In Inspection for Stock Code, the Supplier is now being displayed in the listview.

71841   **Perception: 3**

2015-09-10
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 7
Event: 71841
New Program and Version: IMPGR1 (7.0.021)
Release Notes read as follows:

--- Synopsis ---
When viewing the Gantt Chart if you have more than one operation which uses the same work center, the second operation display was incorrectly aligned with the first operation for this work center

--- Details of Problems Experienced ---
When viewing the Gantt Chart from Structures and Routings, if you have more than one operation which uses the same work center, the second operation display was incorrectly aligned with the first operation for this work center.

--- Changes Implemented ---
The Gantt Chart loaded from Structures and Routings has been changed to now include the operation number in the vertical axis labels as per prior versions of the software. This is required so that each label is unique as the labels are used to define where operation queue time, elapsed time and move time should be displayed in the graph. There is a limitation with the graphics display in that the maximum size of the vertical axis labels are 20 characters which means if you have a work center code which is greater than 15 characters then only the first 15 characters will be displayed with the operation number.

71840   **Perception: 3**

2015/09/25
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 7
Event: 71761
New Program and Version: BOMP3F (7.0.041)
New Program and Version: BOMP3F (7.0.041)
Release Notes read as follows:

--- Synopsis ---
When you enabled Structure and Routing maintenance for an ECO, if ECC custom form definitions were being defined from the BOM custom form definitions, the SQL custom form tables were not created

--- Details of Problems Experienced ---
When you enabled Structure and Routing maintenance for an ECO, if ECC custom form definitions were being defined from the BOM custom form definitions, the SQL custom form tables were not created.This would mean the ECC definitions were on the custom form control table but no ECC custom form tables would exist and hence any copying of custom form data from BOM to ECC or vice versa would cause errors to be output.

--- Changes Implemented ---
The ECC Change ECO Status program has been changed so that if BOM custom form definitions are copied to ECC custom form definitions that the equivalent ECC custom form tables are also created.ECC custom form tables created based on BOM custom form tables[BomParentInfo+] to [EccParentInfo+], [BomOperations+] to [CusEccOperations+], [BomStructure+] to [CusEccStructure+]Important note: If there a no BOM custom form definitions or the ECC custom form definitions already exist then this process is ignored.

2015-09-21
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 7
Event: 71718
New Program and Version: RMAPEN (7.0.023)
Release Notes read as follows:

--- Synopsis ---

Multi-Media for RMA in SYSPRO 7 did not cater for objects at line level as it did in SYSPRO 6.1. In addition, only the header records for RMA multi-media items were converted to SYSPRO 7

--- Details of Problems Experienced ---

Multi-Media for RMA in SYSPRO 7 did not cater for objects at line level as it did in SYSPRO 6.1. In addition, only the header records for RMA multi-media items were converted to SYSPRO 7. Therefore, multi-media objects defined in SYSPRO 6.1 were not available in SYSPRO 7.0 if they were defined using %key. Items not using %key were still available in SYSPRO 7 against the RMA header.

--- Changes Implemented ---

The RMA Query has been changed to cater for multi-media objects defined at line-level. This means that you can define multi-media for RMA both at header or line level. Defaults using %key can also be defined both at header or line level. There is a new multi-media type, 'RMADET'.

2015/09/23
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 7
Event: 71622
New Program and Version: MANSTD.WRK (7.0.)
New Program and Version: MSGMANEN.IMP (7.0.)
New Program and Version: WIPTJB (7.0.072)
Release Notes read as follows:
--- Synopsis ---
When you ran WIP Job Creation and Maintenance business object and created a job, if one of the components did not exist in the component wh to use, the job is created but the component is missing
--- Details of Problems Experienced ---
When you ran the WIP Job Creation and Maintenance business object and created a job, if one of the components did not exist in the component warehouse to use, the job is still created but the component is missing from the job.
--- Changes Implemented ---
The WIP Job Creation and Maintenance business object has been corrected. When creating a job for an item, components which were being ignored because the warehouse record had not been created are now no longer being ignored but rather have been added as allocations. The reason for including these components are that they are required to make the finished good and corrective action can then be done after the job has been created. If a component without a warehouse record is added as an allocation then a warning message is output after the job is created. The warning message is output irrespective of the flag to ignore warnings.

Changing qty on POS screen throws exceptions

--- Details of Problems Experienced ---
When you changed the qty on the POS screen POS would show exception. Please see event 71036 as it is the same problem

--- Changes Implemented ---
I have fixed the program as it was using the new autocomplete box for the description google type search. It will now check if the textbox is in fact a text box or a auto complete box because both the qty field and the input field use the same method.

SYSPRO 7 Update 1 Port:007

69335   **Perception: 3**

2015-09-28
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 7
Event: 69335
New Program and Version: SORPOE (7.0.030)
Release Notes read as follows:

--- Synopsis ---
In SO Entry Express, if you cleared the price UOM on a non-stocked line you got a SQL error.

--- Details of Problems Experienced ---
In SO Entry Express, if you cleared the price UOM on a non-stocked line you got a SQL error.

--- Changes Implemented ---
The SO Entry Express program has been changed to ensure that validation is correct when you change the price UOM on a non-stocked line.

69333   **Perception: 3**

2015-09-29
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 7
Event: 69333
New Program and Version: IMPFRO (7.0.187)
Release Notes read as follows:

--- Synopsis ---
Cannot add new lines to SORPOE's data grid after entering some comment text and selecting the type of document to print.

--- Details of Problems Experienced ---
If you enter comment text into a data grid (for example, using SORPOE Sales Order Entry Express) and without pressing TAB click on the button to select what type of document should be associated with the comment line, then it's possible that thereafterwards you cannot add a new line to the data grid.

--- Changes Implemented ---
The fault is that, in this scenario, the current row in the datagrid is not marked as 'changed' and therefore you cannot add new lines to the grid.The correction is to mark the row as 'changed' as you click on the InPlaceButton.

68801   **Perception: 3**

2015-09-21
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 7
Event: 68801
Release Notes read as follows:

--- Synopsis ---
If you have an operator code of more than 6 characters then the operator preferences held at the program level may not work correctly.

--- Changes Implemented ---
The fault was that the operator key to the file ADMLST.DAT (held in the ...folder) was limited to 6 characters. If an operator code was more than 6 characters the system would still have worked...but might have conflicted with any operator who had the same first six characters.The solution has been to create a new file ADMLFS.DAT (.idx) in the ...folder where the operator key is now 20 characters. The system will automatically convert any records found in the ADMLST and insert them into the new ADMLFS, then remove the record from the ADMLST file.

--- Changes Implemented ---
I removed the debugbreak in the projects and contracts contract setup business object

72050   **Perception: 2**

2015-09-28
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 7
Event: 72050
New Program and Version: IMPFRO (7.0.187)
Release Notes read as follows:

--- Synopsis ---
'dev02' option does not create debug log file.

--- Details of Problems Experienced ---
According to the documentation a diagnostic code of 'dev02' should mean that the events window traces all application events that occur in the normal running of SYSPRO and outputs a debug log file to the ...folder as operator_dev02_debug.txt. However, setting this option to 'dev02' has no effect unless the events window is actually visible.

--- Changes Implemented ---
The diagnostic value of 'dev02' in IMPSET will now cause the system to output a debug log file in the settings folder regardless of whether the events window is visible or not.

72006   **Perception: 2**

2015-09-11
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 7
Event: 71901
New Program and Version: IMPBID (7.0.064)
Release Notes read as follows:

--- Synopsis ---
New ISAM company from Login window allows you to create a company with more than one character in the code.
--- Details of Problems Experienced ---
When creating a new company from the login dialog you can enter multiple characters in the code field.You can then select to make the company an ISAM company and import the license for it and then save it.It is only when trying to log into the company that a problem occurs.When creating a new ISAM company from inside the product you are prevented from entering more than one character.
--- Changes Implemented ---
The process of creating a new company from the login window has been changed to check if the company code is longer than one character when trying to import the license for an ISAM company.

New Program and Version: IMPFRM (7.0.042)
New Program and Version: IMPFRV (7.0.005)
New Program and Version: IMPFSL (7.0.000)
Release Notes read as follows:

--- Synopsis ---
The requirement is to have the ability to link custom form field validation to a lookup table across multiple fields and forms.
--- Reason for enhancement ---
The feature was added so that the custom form field lookup validation for one field can be used for multiple fields and forms. This is to avoid defining duplicate lookup tables for every field and simplifies the maintenance of the lookup table.
--- Details of enhancement ---
Two new validation types have been added to the Custom Form Maintenance program (IMPFRE) i.e. Lookup shared (mandatory) and Lookup shared (not mandatory). These can be maintained by calling a new program IMPFSL.
--- Where would I see this change? ---
This new feature can be seen from the main SYSPRO Ribbon Bar, Administration, Custom Forms.

New Program and Version: SYSPROSRSSERVER.DLL (7.0.006)
New Program and Version: _EV_71433 (7.0.)
Release Notes read as follows:
--- Synopsis ---
SRS Document printing - server side printing does not allow for printing documents on the client
--- Reason for enhancement ---
When printing SRS Documents using server side printing you have to install printers on the report server.In some cases a user will not have access to the report server and will need to print and email documents from the client.
--- Details of enhancement ---
The Document queue was enhanced to store additional information, including the generated document.
The Document setup program was changed to allow an administrator to specify that the document should not be physically printed when printing.
The system setup program was changed to allow an administrator to specify to automatically purge records from the document queue after a period of days.
The Document queue query program was changed to allow a user to change the priority of a In Queue item in the document queue and to preview completed documents. From the preview screen a user will be able to print or email the document(s).There is as yet no ability to select multiple documents in the queue query program and print or email them.
--- Where would I see this change? ---
In the System Setup program on the Reporting Tab there is a new Document Printing group with a option to Automatically purge queue and a entry field to specify the number of days. These options are only available for Server-side reporting.In the Document Setup program you can now select "Do not print" from the Add Printer drop down on the Printers pane. This will instruct the server to generate the document and store it in the database without printing it when a document has been printer. It has no affect when a document is emailed. The option is also available for client side printing, but in this case the generated document is simply discarded.In the Document Queue Query program you can now filter on the document destination (email, print, preview etc) as well as on date and status. You can also select to delete or re-run multiple documents, although the re-run will only reset the status of documents that have failed. A purge function has been added for purging large numbers of documents and a preview option has been made available to view the completed document(s).From the preview screen you can print to either the SYSPRO default printer or a specific printer and you can also select to email the previewed document. If the document was initially sent to the queue to be emailed then the relevant email address will be used by default.Several new activities have been added to the SYSPRO Document Services activity group to control what a user has access to in the Document Queue Query program. the activities that pertain to the

queue query program all start with "SRS Server"

--- Details of enhancement ---
There was a requirement for the AR Invoice terms to age based on fixed buckets as defined by the user.
--- Where would I see this change? ---
The AR Trial Balance program and report have been changed so that it now caters for the new AR invoice terms to age according to the user defined fixed buckets.

Legend:

5 - Critical. This could mean that the software will cause an unrecoverable data loss, it may have a serious financial implication to the customer, there may be a security issue, or there may be legal implications.

4 - Serious. This means that there is a remote chance of data loss, a remote chance of a financial implication to the customer, or that there is a possibility that it will affect many customers.

3 - Error. There is an error in the functionality of the program, but this will not stop the customer doing any major part of their business.

2 - Minor Error. There is a minor error in the functionality of the program, and this will not stop a customer doing any part of their business. This is likely to just be a cosmetic problem.

1 - Enhancement. This is an enhancement to the system.

0 - Ease of use. This may be something that could make life easier for the customer, or a change in the user interface for consistency or to improve usability.

2016/03/15
