2015-11-12

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 009

Event: 73258**New Program and Version:** IMP041 (7.0.185)

Release Notes read as follows:

--- Synopsis ---

When you reprinted a sales order invoice it was possible for the Canadian GST amount to be included in the Invoice tax amount in the invoice totals.

--- Details of Problems Experienced ---

When you reprinted a sales order invoice it was possible for the Canadian GST amount to be included in the Invoice tax amount in the invoice totals. This occurred when the following was true:

Created a new document rather than using the SRS archive process.

Canadian GST is calculated at line level and not at invoice level

The invoice being reprinted has a non zero settlement discount percentage

--- Changes Implemented ---

Sales Order Batch Printing has been changed to ensure that Canadian GST is not included in the Invoice Tax amount regardless of whether a settlement discount is defined against the invoice or whether GST is calculated at line or invoice level.

Release Notes read as follows:

--- Synopsis ---

When a kit item is released from reserved then the shipping quantity is incorrectly calculated.

--- Details of Problems Experienced ---

When a kit item is released from reserved then the shipping quantity is incorrectly calculated. In certain circumstances you end up with a larger figure to ship on the components than the original order quantity.

--- Changes Implemented ---

When the reserved quantity is released for a kit in Sales Order Release Reserved Stock, the released quantity is correctly updated.

SYSPRO 7 Update 1 Port:009**73199****Perception: 4**

2015-11-10

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 009

Event: 73199**New Program and Version:** IMPFRO (7.0.190)

Release Notes read as follows:

--- Synopsis ---

The INTERCHANGE window keeps popping up even when it has been closed by the user.

--- Details of Problems Experienced ---

If the INTERCHANGE window pops up in a data grid (for example, against the stock code column in SORPOE), and if you then close the interchange window, then do a browse, then after returning from the browse the interchange window popups again. If you now close the interchange window again, then the stock code entered by the browse is ignored, thereby creating an invalid stock code entry.

--- Changes Implemented ---

Once you have selected to close the interchange window it should not popup again until you have selected to enter a new data grid row. This has now been corrected.

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 009

Event: 71473**New Program and Version:** SRSPRT (7.0.065)

Release Notes read as follows:

--- Synopsis ---

SRS Document Printing - Random 114 and XML parsing errors

--- Details of Problems Experienced ---

When you print SRS documents you can get a random error, either a 114 memory allocation error, or an XML parsing error or the document could print without data. error would occur at random times, either after one document or after 4 or 5, but usually before 10 documents had been printed. was caused by a memory pointer being corrupted by being moved to a field that was too small when writing out the collection of documents in the batch to the temporary indexed file.

--- Changes Implemented ---

The program SRSPRT was changed to make use of larger fields when storing the pointers to the beginning and end of each document within the batch of documents being printed.

Event: 73078

New Program and Version: IMPFRO (7.0.190)

Release Notes read as follows:

--- Synopsis ---

When custom form fields are saved for any form, they are always all being saved even if a custom form field hasn't changed.

--- Details of Problems Experienced ---

When custom form fields are saved for any form, they are always all being saved even if a custom form field hasn't changed. This can cause a performance overhead if you have a large number of custom form fields.

--- Changes Implemented ---

The system will now only save custom form fields if a value has changed.

26/11/2015

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 009

Event: 73041**New Program and Version:** _EV_73089 (7.0.)

Release Notes read as follows:

--- Synopsis ---

Replication setup fails when running SYSPRO 6.1

--- Details of Problems Experienced ---

When using SYSPRO 6.1 and the web.config tags called SysproAdminDbCollation and SysproAdminDbName are not specified and the operator clicks any of the replication setup buttons under branch setup a error message would be displayed showing "the service reference was not found." instead of the actual error message experienced.

--- Changes Implemented ---

The program has been changed to properly handle exceptions before returning the error message to the client side. It will now display the proper error message saying that these web.config values are required.

Release Notes for SYSPRO 7 Update 1 Port 009

Event: 72742**New Program and Version:** IMPFRO (7.0.190)**New Program and Version:** IMPMEN (7.0.172)**New Program and Version:** IMPQVW.IMP (7.0.013)

Release Notes read as follows:

--- Synopsis ---

List view column names are sometimes inconsistently applied. For example, in APSPEN the column for PURCHASE ORDER is called P/Order in the SCRAP list view.

--- Details of Problems Experienced ---

List view column names are sometimes inconsistently applied. For example, in APSPEN the column for PURCHASE ORDER is called P/Order in the SCRAP list view. This in turn means that custom columns and TABLE columns cannot be successfully added to the SCRAP list view because the column name P/Order is not included there.

--- Changes Implemented ---

Rather than having to rewrite many programs to apply the caption Purchase Order throughout the product to be P/Order, a simpler solution is to add column names that need to be modified to the file IMPQVW.IMP in the new section [Column Names]. This section contains any column names that require changing to be the new name so that custom and table columns can be applied.

Release Notes read as follows:

--- Synopsis ---

SRS Report name is blank in SRS Report Queue Query program

--- Details of Problems Experienced ---

When printing certain SRS reports the report is added to the Report queue but the report name is blank and you get an error when trying to rerun the report. is because there are some SRS reports that do not have all of the components to be run from the menu and they can only be run from inside a standard SYSPRO program using the SRS Document Printing architecture.

--- Changes Implemented ---

The SRS Document printing programs have been changed to allow a print program to pass a report name through to the document printing architecture so that the report name is not blank. pressing the rerun button in the Report Queue the Service will now check if there is enough information to be able to reprint the report (business object name and XMLIn for the business object) and if it is not found then a message is displayed stating that the report cannot be rerun.

Event: 72635
New Program and Version: _EV_73089 (7.0.)
Release Notes read as follows:
--- **Synopsis** ---
Specific web service calls to StockCode service in POS throws exceptions
--- **Details of Problems Experienced** ---
When a call was made to StockCodeService.SafetyQtyAvailableSelect, StockCodePriceSelect or IsContractPriceCustomer then POS would cause exceptions if running SYSPRO 7. The reason is these methods are not used by POS at all but rather by external ecommerce sites and have not been updated with the rest of the service calls for SYSPRO 7.
--- **Changes Implemented** ---
The 3 calls were updated to be inline with all other queries and will also now return a more detailed result which either contains the proper result with no errors or a error explaining that the exception log for POS has to be investigated to determine any further problems.

Release Notes for SYSPRO 7 Update 1 Port 009

Event: 72420**New Program and Version:** IMPBP1 (7.0.091)

Release Notes read as follows:

--- Synopsis ---

The OnDELPressed event for a script in a customized pane list view does not always populate the CustomizedPane.CodeObject.ListviewRowReturned variable correctly.

--- Details of Problems Experienced ---

The OnDELPressed event for a script in a customized pane list view does not always populate the CustomizedPane.CodeObject.ListviewRowReturned variable correctly. Specifically, if the script contains the OnRowSelected event as well as the OnDELPressed event then this variable can become null.

--- Changes Implemented ---

The system has been corrected to ensure that the variable CustomizedPane.CodeObject.ListviewRowReturned is correctly defined for use in the script.

67085**Perception: 3**

28/11/2015

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 009

Event: 67085**New Program and Version:** IMPFRO (7.0.191)

Release Notes read as follows:

--- Synopsis ---

If you copy a row from SORPOE to the clipboard and then paste it back into the data grid, then the contents of pasted records are not saved correctly.

--- Changes Implemented ---

The fault was that copied rows are automatically sent to the clipboard with the same data as shown visibly in the data grid. However, some columns contain underlying data values that require to be filled in rather than what is shown on the screen. For example, the LINE TYPE column may well show 'Stocked' as the caption in a row cell, but unfortunately the data associated with this value is '1', and it is this value that needs to be sent to the clipboard. The change has been to intercept records about to be copied to the clipboard and transform any columns containing constraints to be their associated data value - this then makes the PASTE function work correctly.

The full journal key is not saved to the Lot transaction record, therefore it is difficult to track the journals back to the lot transactions.

--- Changes Implemented ---

The Inventory Movements program has been changed to save the full journal key to the Lot transaction records.

SYSPRO 7 Update 1 Port:009**73298****Perception: 2**

2015-11-25

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 009

Event: 73298**New Program and Version:** IMPBLT (7.0.017)

Release Notes read as follows:

--- Synopsis ---

When you ran the Browse on Lot Transactions program, it was difficult to track journals back to the lot transactions

--- Details of Problems Experienced ---

When you ran the Browse on Lot Transactions program, it was difficult to track journals back to the lot transactions. This occurred because the full journal key was not saved to the Lot transaction record making it difficult to track the journals back to the lot transactions.

--- Changes Implemented ---

The Browse on Lot Transactions program has been changed to display the journal information for the Lot transaction records. These new fields are: Journal Year, Journal Month, Journal Number and Journal Line Number.

2015-11-24

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 009

Event: 70249**New Program and Version:** ARSPB1 (7.0.032)

Release Notes read as follows:

--- Synopsis ---

Stock codes captured against a customer are being displayed when maintaining global interchanges.

--- Details of Problems Experienced ---

When capturing stock codes against a customer in the AR Customer Stock Codes program, and then selecting 'Maintain global interchange', the stock code that was previously being captured against a customer was incorrectly being displayed against the stock code.

--- Changes Implemented ---

1. Stock codes captured against a customer are no longer being incorrectly displayed when maintaining global interchanges. 2. The 'Adjust Rows to Display' option on the AR Customer Stock Code Maintenance listview in the AR Customer Stock Codes program has been disabled because a limitless listview does not have this functionality. 3. Selecting "New" now creates a new line and sets focus in the first field in the listview. 4. The browse button against "Customer stock code description" have been removed. 5. If a user selects either 'Range' or 'Single' (within Options) for Customer stock code or Stock code, focus now automatically get set on the relevant 'From..' entry field. 6. If the 'Autoload Values' is set to Load Previous Form Values, when the program first loads, the 'Refresh Options' button is now correctly disabled until such time as a change is made to the options. 7. If the 'Maintain global interchanges' is selected, the Stock code selection section within Options becomes disabled and when the 'Maintain global interchanges' is de-selected, this section becomes enabled again. However if the user had entered values for either 'Range' or 'Single' for the Stock code selections, the relevant From and To fields were not being enabled. This has been corrected. 8. The columns available within the listview when maintaining Global Interchanges has been corrected.

Release Notes for SYSPRO 7 Update 1 Port 8

Event: 66331**New Program and Version:** COMQOP (7.0.000)**New Program and Version:** COMQOP.XML (7.0.)**New Program and Version:** COMQOP.XSD (7.0.)**New Program and Version:** COMQOPOUT.XML (7.0.)**New Program and Version:** COMQOPOUT.XSD (7.0.)**New Program and Version:** OPERATOR_PROGRAM_LIST (7.0.)

Release Notes read as follows:

--- Synopsis ---

This event is to create a business object to retrieve program access per operator. The secondary objective is to create an SRS Report driven by that business object.

--- Reason for enhancement ---

The current Operator Auditing Report needs to be further enhanced to enable reporting per security item. In addition to being able to determine what access an operator has, the user needs to be able to see which operators have access to a specific feature, be it programs or activities and fields or eSignatures etc. In addition to being able to see real-time access options, a reporting option is required so that reports can be automated and archived for auditing purposes.

--- Details of enhancement ---

The current Operator Auditing Report needs to be further enhanced to enable reporting per security item. In addition to being able to determine what access an operator has, the user needs to be able to see which operators have access to a specific feature, be it programs or activities and fields or eSignatures etc. In addition to being able to see real-time access options, a reporting option is required so that reports can be automated and archived for auditing purposes.

--- Where would I see this change? ---

The SRS Report 'Operator Program List' can be run from the SRS Main Menu.

SYSPRO 7 Update 1 Port:009**Legend:**

- 5** - Critical. This could mean that the software will cause an unrecoverable data loss, it may have a serious financial implication to the customer, there may be a security issue, or there may be legal implications.
- 4** - Serious. This means that there is a remote chance of data loss, a remote chance of a financial implication to the customer, or that there is a possibility that it will affect many customers.
- 3** - Error. There is an error in the functionality of the program, but this will not stop the customer doing any major part of their business.
- 2** - Minor Error. There is a minor error in the functionality of the program, and this will not stop a customer doing any part of their business. This is likely to just be a cosmetic problem.
- 1** - Enhancement. This is an enhancement to the system.
- 0** - Ease of use. This may be something that could make life easier for the customer, or a change in the user interface for consistency or to improve usability.
