7/28/2016

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 76800**New Program and Version:** _EV_76831 (7.0.)

Release Notes read as follows:

--- Synopsis ---

POS: Setting up large number of payment codes causes Take Payment screen to auto grow beyond physical screen size

--- Details of Problems Experienced ---

When more than 24 payment codes are added the payment screen "auto grows" bigger than the physical screen and all buttons cannot be seen.

--- Changes Implemented ---

The program has been changed to display the payment buttons in a fixed height block that will contain a scroll bar as soon as more than 12 payment codes must to be shown.

SYSPRO 7 Update 1 Port:017**76732** **Perception: 4**

28 Jul 2016
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 017
Event: 76732
New Program and Version: _EV_76831 (7.0.)
Release Notes read as follows:

--- Synopsis ---

POS: Maintaining a line using alternateUOM causes qty available validation to fail

--- Details of Problems Experienced ---

When maintaining a line on normal POS screen and changing the qty with Alternate or Other UOM being used the qty available calculation used the qty in stock uom and compared it to the qty currently being added.

--- Changes Implemented ---

The program has been changed to convert all quantities to stock UOM before doing qty available calculations and validation.

76706 **Perception: 4**

08/07/2016
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 017
Event: 76706
New Program and Version: APSPIN (7.0.048)
New Program and Version: TAXMOD.PRO (7.0.)
New Program and Version: TAXMOD.WRK (7.0.)
Release Notes read as follows:

--- Synopsis ---

When you ran the AP Invoice Posting program for an 'Exclusive tax' transaction where the 'Entered tax' differed from the 'Calculated tax', the Tax Report and Tax Return reflected different values.

--- Details of Problems Experienced ---

When you ran the AP Invoice Posting program for a transaction where the 'Entered tax' differed from the 'Calculated tax', the Tax Report and the Tax Return reflected different amounts. This was only applicable when processing an exclusive tax transaction.

--- Changes Implemented ---

The AP Invoice Posting program has been enhanced to allow the user to 'Change Tax Amounts' if the program detects a difference between the 'Entered tax' and the 'Calculated tax'.

Release Notes read as follows:

--- Synopsis ---

POS: Loading document templates fail depending on Regional settings - List separator of the server

--- Details of Problems Experienced ---

When windows is set to have a ; under Regional settings - Formats for the List separator instead of a , then opening documents in the designer of POS and saving them would break the template and you will not be able to reload the template again.

--- Changes Implemented ---

The program has been changed to check for ; when the templates are saved. The ; will be replaced with a , so that the template can be successfully reloaded.

76062**Perception: 4**

2016/07/15

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 76062**New Program and Version:** SORTOV (7.0.072)

Release Notes read as follows:

--- Synopsis ---

e.net: If you added a stocked line for a stock code that has a returnable item service charge attached and that service charge was invalid, only the stocked line was added and no error was returned.

--- Details of Problems Experienced ---

If you added a stocked line for a stock code that has a returnable item service charge attached and that service charge was invalid, only the stocked line was added and no error was returned.

--- Changes Implemented ---

The SO Import business object was changed to validate any attached service charges attached to a stocked line, if parameter 'AddAttachedServiceCharges' is set to 'Y' or 'M'.

SYSPRO 7 Update 1 Port:017**75968****Perception: 4**

2016/07/28

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 75968**New Program and Version:** SORTOI (7.0.112)

Release Notes read as follows:

--- Synopsis ---

When using the SO Import business object for an order that has a route allocation, the detail lines were not automatically allocated to a load if you did not supply detail line numbers.

--- Details of Problems Experienced ---

When using the SO Import business object for an order that has a route allocation, the detail lines were not automatically allocated to a load if you did not supply detail line numbers.

--- Changes Implemented ---

The SO Import business object has been changed to ensure that detail lines are correctly allocated to loads for an order that has a route allocation, even if you do not supply detail line numbers.

71635**Perception: 4**

2016/07/28

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 71635**New Program and Version:** _EV_76831 (7.0.)

Release Notes read as follows:

--- Synopsis ---

POS: Serial validation required when warehouse is changed on normal POS screen

--- Details of Problems Experienced ---

When a serialized item is added on the POS screen for example SER200 with a serial number from warehouse N and the line is maintained and only the warehouse is changed to E the serial validation would be skipped. When the transaction is completed it would get stuck in Manage Online with a message that the serial does not exist in warehouse N.

--- Changes Implemented ---

The program has been changed to do serial validation when a warehouse change is made and clear out the existing serials so they will have to be added again using the new warehouse.

SYSPRO 7 Update 1 Port:017**71431****Perception: 4**

28 Jul 2016

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 71431**New Program and Version:** SORTOI (7.0.112)

Release Notes read as follows:

--- Synopsis ---

When you added a sales order using the SO Import business object, if you changed the Area in the header and you use Tax by Geo Area, the tax for the sales order was not changed to reflect the new Area

--- Details of Problems Experienced ---

When you added a sales order using the SO Import business object, if you changed the Area in the header and you use Tax by Geo Area, the tax for the sales order was not changed to reflect the new Area.

--- Changes Implemented ---

The SO Import business object has been changed to ensure that the tax for the correct Area will be used if you change the Area in the header, and you use Tax by Geographic Area. you change the Geographic Area when using Multiple Ship to Address, but you do not have access to the activity - "SO Allow change to geographic area if multiple ship-to-address in use", then the Area you entered will be ignored and the one from the Customer Master file will be used. In addition, the program has been changed to ensure that the Customer Master Address3 - Location field will be moved to the Sales Order Header Address3 - Location field.

Perception: 3**77452****Perception: 3**

2016/08/02

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 77452**New Program and Version:** IMPNCO (7.0.015)

Release Notes read as follows:

--- Synopsis ---

When setting up a new system and adding a company, the SQL Server login and bulk insert temporary folder were not always validated correctly - for example, allowing spaces.

--- Details of Problems Experienced ---

When you added a new company (when setting up a new system) the default SQL login and password could accept spaces as a valid combination. If you did this then later the wizard could prompt you for the SQL login and password - this was confusing.

--- Changes Implemented ---

When adding a new company the SQL Server login, password, codepage and temp bulk insert folder will be validated.

01/08/2016

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 77326**New Program and Version:** PORP86 (7.0.014)**New Program and Version:** PORPRM (7.0.004)

Release Notes read as follows:

--- Synopsis ---

If you are importing from a file, but choose to review the file contents first, the import programs no longer "delete file after use" even if the option is initially selected

--- Details of Problems Experienced ---

If you are importing from a file, but choose to review the file contents first, the import programs no longer "delete file after use" even if the option is initially selected. This functionality was by design, as we originally decided that once the data/processing is transferred to the grid, the "link" to the import file on disk is lost. This was because the user could change the details in the grid to no longer relate back to the original import file.

--- Changes Implemented ---

We have now decided to change all import programs to delete the file after use (if the option is selected) even if the file is reviewed.

77272**Perception: 3**

26 Jul 2016

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 77272**New Program and Version:** IMPBIS (7.0.033)

Release Notes read as follows:

--- Synopsis ---

When you ran the Supplier Invoice browse program, the 'Payment reference' field was incorrectly populated with 'Payment reference' information from the previous payment line.

--- Details of Problems Experienced ---

When you ran the Supplier Invoice browse program, the 'Payment reference' field was incorrectly populated with 'Payment reference' information from the previous payment line. The 'Payment reference' field should not be populated for an 'Invoice' line.

--- Changes Implemented ---

When you run the Supplier Invoice browse program, the 'Payment reference' field is now populated with spaces for an 'Invoice' line.

2016/07/27

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 77262**New Program and Version:** INVPSQ (7.0.011)

Release Notes read as follows:

--- Synopsis ---

When you run the 'Inventory Stock Take Query program', you receive an inappropriate error message if you select a Single warehouse, then deselect items not captured and exceptions only and refresh.

--- Details of Problems Experienced ---

When executing the 'Inventory Stock Take Query' program, if you select a Single warehouse; then click on 'Refresh Stock Codes', then select 'Items not captured' and 'Exceptions only' options or deselect both 'Items not captured' and 'Exceptions only' options, and click on 'Refresh Stock Codes' the program would then return an inappropriate "blank warehouse" error message, even though a single warehouse is still selected. In addition you would notice the 'Refresh Stock Codes' button in capital letters.

--- Changes Implemented ---

When you run the 'Inventory Stock Take Query' program, you select a single warehouse selection, and click on on the 'Refresh Stock Codes' button, then select 'Items not captured' and 'Exceptions only' options or deselect both 'Items not captured' and 'Exceptions only' options, and click on 'Refresh Stock Codes' an appropriate dialog message will be displayed if stock take item row(s) are not populated in the listview. In addition you will notice the 'Refresh Stock Codes' button is no longer capital letters.

Release Notes read as follows:

--- Synopsis ---

e.net: If you allocated a serial to an order line and the serial was not stocked in the warehouse of the sales order line, you got the incorrect message

--- Details of Problems Experienced ---

If you allocated a serial to an order line and the serial was not stocked in the warehouse of the sales order line, you got the incorrect message.

--- Changes Implemented ---

The SO Back Order Release business object has been changed to return the correct error message when you allocate a serial to an order line when the serial is not stocked in the order line's warehouse.

77164**Perception: 3**

2016/07/26

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 77164**New Program and Version:** SA_SALES_PROFITABILITY (7.0.003)**New Program and Version:** SO_ORDER_PROFITABILITY_REPORT (7.0.005)

Release Notes read as follows:

--- Synopsis ---

When the SA Sales Profitability report was printed on a letter page setup, the report print-out would truncate the fields on the right edge of the report.

--- Details of Problems Experienced ---

The SA Sales Profitability report template was designed on an A4 page layout which truncated the last fields when printed on smaller letter page print-outs. In SYSPRO, the default report template page layout is "letter". This problem was also picked up on the SO Order Profitability report as well.

--- Changes Implemented ---

The Crystal templates for the Sales Profitability report, "tem_sa_sales_profitability", and the Order Profitability report, "tem_so_order_profitability", have been updated to ensure that they have a letter page layout and to conform to SYSPRO standards.

2016/07/28

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 77163**New Program and Version:** IMPIMP (7.0.020)

Release Notes read as follows:

--- Synopsis ---

When you ran Import Master Data, the program was failing with duplicate key entries for certain programs.

--- Details of Problems Experienced ---

When you ran Import Master Data, the program was failing with duplicate key entries for certain programs. The XML schemas for these objects do not have the "Key" element, and this makes the Import Master Data program fail to determine the actual key to use. The setup programs affected are: 1. ASSSAS - Assets ; 2. ASSSDP - Asset Depreciation Codes; 3. IOPSSL - IOP Initial Sales History; 4. IOPSPO - IOP IO Policies

--- Changes Implemented ---

The Import Master Data program has been modified to ensure that it checks duplicate keys correctly.

Release Notes read as follows:

--- Synopsis ---

The requirement is for a minor database upgrade handling new tables and new columns in existing tables

--- Details of Problems Experienced ---

The requirement is for a minor database upgrade handling new tables and new columns in existing tables.

--- Changes Implemented ---

Immediately after logging into SYSPRO after the SYSPRO 7 Update 1 August 2016 port (port 017), there will be a short delay whilst the minor database upgrade is applied. Once completed, you will be able to login and use SYSPRO and e.net Solutions as normal. change only affects SQL Server based systems. following steps are executed - if any of these fail the

SYSPRO 7 Update 1 Port:017

administrator can attempt to login again and restart the process. If there is a problem with the bulk insert information ('sa' login or password, bulk insert code page or temporary folder) then an administrator can continue the login and correct the problem using the system setup program, save and exit SYSPRO and then try again. 1. The system-wide database upgrade script is applied. 2. Data dictionary is transferred from BASE_701 to the system-wide database. The tables named DdsTables, DdsColumns, DdsIndexes and DdsForeignKey should be treated as 'read-only', i.e. you must not add, change or delete data in these tables. 2. If you are using SYSPRO Espresso, then the Espresso tables are created and populated in the system-wide database. 3. If you are using SYSPRO Point of Sale, then the new system-wide data dictionary tables will be setup for replication if required. 4. The current company database will be upgraded by running the company specific script. 5. All other companies will be upgraded using the company specific script. note: You MUST NOT run any of the upgrade scripts manually - they must only be run by the SYSPRO login process.

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 77033**New Program and Version:** IMPDG6 (7.0.031)**New Program and Version:** IMPSQD (7.0.006)

Release Notes read as follows:

--- Synopsis ---

When you migrate your database to SQL Azure there must not be any replication syntax. SYSPRO's foreign keys say 'NOT FOR REPLICATION' which is not allowed.

--- Details of Problems Experienced ---

When you migrate your database to SQL Azure there must not be any replication syntax. SYSPRO's foreign keys say 'NOT FOR REPLICATION' which is not allowed. you attempt to create a 'bacpac' file the validation will give an error - see the following example fragment from the message log file: or more unsupported elements were found in the schema used as part of a data package. SQL71564: Element Foreign Key: [dbo].[Syspro_FK_TpmPromThreshold_TpmPromotion] has an unsupported property IsNotForReplication set and is not supported when used as part of a data package.

--- Changes Implemented ---

The program IMPDG6 allows you to rebuild Foreign keys. It now has an option that should be used when migrating your database to SQL Azure. This simply removes the 'NOT FOR REPLICATION' clause when building the foreign keys allowing you to create a 'bacpac' file.

Release Notes read as follows:

--- Synopsis ---

POS: Invoice search not finding invoices as expected

--- Details of Problems Experienced ---

When a offline invoice is processed and this transaction is copied to head office and posting into SYSPRO has started but it fails, for example it cannot create the salesorder, the invoices could not be searched on the invoice reprint invoice search screen.

--- Changes Implemented ---

The invoice search has been changed to correctly look at transaction types and posting statuses instead of salesorder and invoice values to determine if the transaction should be included in the result set or not. problem that was fixed is that the SYSPRO branch was matched to the POS branch directly so if the POS branch and the SYSPRO branch against it was setup with different branch codes the invoice search would also not return any results.

7/21/2016

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 76773**New Program and Version:** SORPS4 (7.0.019)

Release Notes read as follows:

--- Synopsis ---

When you use multi-language for document print, any file with the language code against it was being saved with spaces in the language code for the system default language

--- Details of Problems Experienced ---

When you use multi-language for document print, any file with the language code against it was being saved with spaces in the language code for the the system default language. Therefore spaces in the language code represented the users system default language. The problem with this was that users can log into the same system using a different system default language. Therefore depending on what language you logged in as, the language code spaces represented different languages.

--- Changes Implemented ---

When the multi-language option is switched on, any narrations currently on file with spaces against the language are now called global notes. The programs have changed so that when any language is selected regardless of whether it's your system default language or not, the actual language code will be written away to the files. A new option in the language dropdowns has been added, "global" which is not assigned specifically to a language and that is now your default/global narrations which will have spaces against the file. When the user prints documents and the option to print in foreign text is not selected, the global narrations will be printed. Previously if the user did not select to print in foreign text their system default language narrations were printed. Any documents/customer that do not have a language assigned to them i.e. the language is spaces then the global narrations will be printed.

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 76725**New Program and Version:** IMPFRO (7.0.198)

Release Notes read as follows:

--- Synopsis ---

If you have a decimal place defined as a COMMA, and the thousands separator as a DOT, then when backspacing a value field in a form the thousands separator changes to a DOT.

--- Details of Problems Experienced ---

If you have a decimal place defined as a COMMA, and the thousands separator as a DOT, then when backspacing a value field in a form the thousands separator changes to a DOT. Thus 2.000,000 becomes 2,000,000

--- Changes Implemented ---

The system has been corrected. In addition, this corrects a previous error to help enter a decimal place on a numeric keypad so that you can enter a . as a decimal place. This cannot work if the thousands separator is also a DOT, as the program cannot determine you are attempting to enter a decimal place or a thousands separator.

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 76592**New Program and Version:** WIPPDD (7.0.027)

Release Notes read as follows:

--- Synopsis ---

If you change the work center capacity and re run the trial loading for a job, then the new capacity is not taken into account when calculating the elapsed time and start and end dates.

--- Details of Problems Experienced ---

If you change the work center capacity and re run the trial loading for a job without changing the quantity on the job, then the new capacity is not taken into account when calculating the elapsed time and start and end dates. Previously only a change in job quantity triggered the trial loading to re calculate, now it will always recalculate.

--- Changes Implemented ---

If you change the work center capacity and re run the trial loading for a job without changing the quantity on the job, then the new capacity is now taken into account and the elapsed time/job start and end dates will recalculate accordingly.

Release Notes read as follows:

--- Synopsis ---

When you use multi-language for document print, any file with the language code against it was being saved with spaces in the language code for the system default language

--- Details of Problems Experienced ---

When you use multi-language for document print, any file with the language code against it was being saved with spaces in the language code for the system default language. Therefore spaces in the language code represented the users system default language. The problem with this was that users can log into the same system using a different system default language. Therefore depending on what language you logged in as, the language code spaces represented different languages.

--- Changes Implemented ---

When the multi-language option is switched on, any narrations currently on file with spaces against the language are now called global notes. The programs have changed so that when any language is selected regardless of whether it's your system default language or not, the actual language code will be written away to the files. A new option in the language dropdowns has been added, "œglobal" which is not assigned specifically to a language and that is now your default/global narrations which will have spaces against the file. When the user prints documents and the option to print in foreign text is not selected, the global narrations will be printed. Previously if the user did not select to print in foreign text their system default language narrations were printed. Any documents/customer that do not have a language assigned to them i.e. the language is spaces then the global narrations will be printed.

Release Notes read as follows:

--- Synopsis ---

When you use multi-language for document print, any file with the language code against it was being saved with spaces in the language code for the system default language

--- Details of Problems Experienced ---

When you use multi-language for document print, any file with the language code against it was being saved with spaces in the language code for the system default language. Therefore spaces in the language code represented the user's system default language. The problem with this was that users can log into the same system using a different system default language. Therefore depending on what language you logged in as, the language code spaces represented different languages.

--- Changes Implemented ---

When the multi-language option is switched on, any narrations currently on file with spaces against the language are now called global notes. The programs have been changed so that when any language is selected regardless of whether it is your system default language or not, the actual language code will be written away to the files. A new option in the language dropdowns has been added, "Global" which is not assigned specifically to a language and that is now your default/global narrations which will have spaces against the file. When the user prints documents and the option to print in foreign text is not selected, the global narrations will be printed. If the user did not select to print in foreign text their system default language narrations were printed. Documents/customer that do not have a language assigned to them i.e. the language is spaces then the global narrations will be printed.

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 74950**New Program and Version:** SERVICESDIAGNOSTICSSERVER.VBS (7.0.)

Release Notes read as follows:

--- Synopsis ---

On a workstation, when you launch the SYSPRO Diagnostics Manager then click on Check Services button, the SYSPRO Services screen does not display anything leaving a blank screen.

--- Changes Implemented ---

The check for SYSPRO POSin the script had a minor correction done.

SYSPRO 7 Update 1 Port:017

74916**Perception: 3**

13/07/2016

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 74916**New Program and Version:** SORPS4 (7.0.018)

Release Notes read as follows:

--- Synopsis ---

When you ran the Dispatch Note Header program, the check box to 'Add to Dispatch' was always checked when you created the second dispatch from a sales order.

--- Details of Problems Experienced ---

When you ran the Dispatch Note Header program, the check box to 'Add to Dispatch' was always checked when you created the second dispatch from a sales order. This caused operators to incorrectly add dispatches to existing dispatches.

--- Changes Implemented ---

The Dispatch Note Header program has been changed to uncheck the check box to 'Add to Dispatch' when you create the second dispatch from a sales order.

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 64380**New Program and Version:** SORPS7 (7.0.044)

Release Notes read as follows:

--- Synopsis ---

When you cancelled a Dispatch Note or Dispatch Note Line for a manual serialized stock code, the reference to the customer was not removed from the serial header table

--- Details of Problems Experienced ---

When you cancelled a Dispatch Note or Dispatch Note Line for a manual serialized stock code, the reference to the customer was not removed from the serial header table. For manual serials, the customer is saved to the InvSerialHead table at the time of creating the dispatch note. If this line or dispatch note is then cancelled, the reference to the customer should be removed.

--- Changes Implemented ---

This has been corrected so that when you cancell a Dispatch Note or Dispatch Note Line for a manual serialized stock code, the reference to the customer will be removed from the serial header (InvSerHead) table.

2016/07/27

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 76928**New Program and Version:** GENPGQ (7.0.018)

Release Notes read as follows:

--- Synopsis ---

When using the GL Structure Query program and the timeout function against the operator was selected, the program did not take into account the timeout settings against the operator.

--- Details of Problems Experienced ---

When using the GL Structure Query program and the timeout function against the operator was selected, the program did not take into account the timeout settings against the operator. only occurred when the operator had selected the option "Timeout required in menu and queries"™ which allowed SYSPRO to close programs and logout after a certain period of inactivity. addition, it was found that if an operator was set up with no access to the root levels for queries, an unnecessary error message was given ("The Section must be '>1 AND NOT >2").

--- Changes Implemented ---

When now using the GL Structure Query program and the timeout function against the operator is selected, the program will take into account the timeout settings against the operator. In addition, there is no longer an error when the operator does not have access to the root levels for queries.

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 74716**New Program and Version:** CMSPB1 (7.0.018)**New Program and Version:** _EV_74617 (7.0.)

Release Notes read as follows:

--- Synopsis ---

In "CMSPB1 - Contact Browse" the page navigation functionality was faulty.

--- Details of Problems Experienced ---

In "CMSPB1 - Contact Browse" the page navigation functionality was behaving inconsistently. Additionally when selecting a contact in "CMSP10 - Contact Maintenance" and then browsing on existing contacts, the list of contacts displayed was faulty.

--- Changes Implemented ---

"CMSPB1 - Contact Browse" has been amended to correct the page navigation and to display the correct number of contacts when called from "CMSP10 - Contact Maintenance".

Event: 76611**New Program and Version:** COMSTD.WRK (7.0.)**New Program and Version:** DISSTD.WRK (7.0.)**New Program and Version:** INVTBG (7.0.000)**New Program and Version:** MSGCOMEN.IMP (7.0.027)**New Program and Version:** MSGDISEN.IMP (7.0.)

Release Notes read as follows:

--- Synopsis ---

Business object to compare and balance the Goods in Transit quantities and values and to update the inventory warehouse with the quantity and value currently in transit

--- Reason for enhancement ---

Currently the corrections for balancing issues requires you to run the balancing functions in the relevant modules and most of these take a substantial amount of time and process functions which are actually not necessary (for example calculation of inventory valuation in the inventory balance function). is a requirement to provide a suite of business objects that will quickly correct, where possible, balancing issues that are found by the health check queries. is important to note that whils these balancing functions may well lock rows and possibly tables the aim is to make them efficient to the point where they have little or no impact on transacting

--- Details of enhancement ---

A new business object, INVTBG, has been written which, in a SQL environment, will correct out-of-balance issues between the Goods in Transit tables (the transactions are seen as the correct figures) as well as updating the quantity and value in transit on the warehouse table. object applies the same corrections to the goods in transit as is performed by the 'Balance goods in transit' option in the Inventory period end.

--- Where would I see this change? ---

This will form part of the health check suite of business objects.

Event: 76602**New Program and Version:** COMQHC (7.0.000)**New Program and Version:** IMPTRN_105001.XML (7.0.)

Release Notes read as follows:

--- Synopsis ---

Controlling business object to use to perform health checks

--- Reason for enhancement ---

Currently there is no easy way to easily identify whether a module's balance function needs to be run or whether your SQL database is healthy and conforms to SYSPRO's requirements. Because of this the various balance functions and checks are run often (in many cases daily) when they are not actually required. is a requirement to provide a suite of business objects that will quickly identify whether or not there are issues in the data allowing you to establish whether any of the out-of-balance correction functions need to be run. It will also identify whether maintenance is required on your SQL database.

--- Details of enhancement ---

A new business object has been written that allows you to run health checks on various parts of the system. health checks available from this business object are:

The on hand quantities against multiple bins, lots and FIFO/LIFO buckets are all in balance with inventory

The sales order quantities are in balance with each other (i.e. the quantities on the detail line match those with the lots, bins or serials selected)

The sales order quantities are in balance with inventory

The Goods in transit values and quantities are in balance with each other and with inventory

The SYSPRO database contains all the columns, keys and indexes required by SYSPRO to work correctly

SYSPRO 7 Update 1 Port:017**75144****Perception: 1**

7/29/2016

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 75144**New Program and Version:** INVQBG (7.0.000)

Release Notes read as follows:

--- Synopsis ---

Business object to check whether the Goods in Transit quantities and values balance between the transactions, details and header. Also whether these figures balance to the target warehouse.

--- Reason for enhancement ---

Currently there is no easy way to easily identify whether a module's balance function needs to be run or whether your SQL database is healthy and conforms to SYSPRO's requirements. Because of this the various balance functions and checks are run often (in many cases daily) when they are not actually required. is a requirement to provide a suite of business objects that will quickly identify whether or not there are issues in the data allowing you to establish whether any of the out-of-balance correction functions need to be run. It will also identify whether maintenance is required on your SQL database. is important to note that these checks will be available to run whilst the system is in use and operators are transacting.

--- Details of enhancement ---

A new business object INVQBG has been written that, in a SQL environment, will add up the quantities and values on the GTR transaction table and compare these with the figures on the GTR Detail and GTR Master tables. It will also compare these figures against the warehouse table to ensure that the quantity and value in transit is correct. differences are found between these then, where relevant, these are written out to either the GtrBalances table (this holds the differences between the Goods in Transit tables) and the InvGtrBalance table (this holds the differences between the Goods in Transit table and the inventory warehouse table).

--- Where would I see this change? ---

e.net. This will form part of the health check suite of business objects

Event: 75143**New Program and Version:** DISSTD.WRK (7.0.)**New Program and Version:** INVTBL (7.0.000)**New Program and Version:** MSGDISEN.IMP (7.0.)

Release Notes read as follows:

--- Synopsis ---

Business object to compare and balance the on hand quantities against the warehouse, lots, bins and FIFO/LIFO buckets.

--- Reason for enhancement ---

Currently the corrections for balancing issues requires you to run the balancing functions in the relevant modules and most of these take a substantial amount of time and process functions which are actually not necessary (for example calculation of inventory valuation in the inventory balance function). is a requirement to provide a suite of business objects that will quickly correct, where possible, balancing issues that are found by the health check queries. is important to note that whils these balancing functions may well lock rows and possibly tables the aim is to make them efficient to the point where they have little or no impact on transacting.

--- Details of enhancement ---

A new business object, INVTBL, has been written which, in a SQL environment, will correct out-of-balance issues between multiple bins, lots, FIFO/LIFO and inventory quantities on hand. object applies the same corrections to the on hand quantities as the balance function found in the Inventory Period End program. It does not process the goods in transit balance function.

--- Where would I see this change? ---

e.net: This will form part of the health check suite of business objects.

SYSPRO 7 Update 1 Port:017**74914****Perception: 1**

7/29/2016

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 74914**New Program and Version:** INVQBS (7.0.000)

Release Notes read as follows:

--- Synopsis ---

Business object to check whether the quantities against sales orders are all in balance with the relevant inventory quantities including lots, bins and serials.

--- Reason for enhancement ---

Currently there is no easy way to easily identify whether a module's balance function needs to be run or whether your SQL database is healthy and conforms to SYSPRO's requirements. Because of this the various balance functions and checks are run often (in many cases daily) when they are not actually required. is a requirement to provide a suite of business objects that will quickly identify whether or not there are issues in the data allowing you to establish whether any of the out-of-balance correction functions need to be run. It will also identify whether maintenance is required on your SQL database. is important to note that these checks will be available to run whilst the system is in use and operators are transacting.

--- Details of enhancement ---

A new business object INVQBS has been written which compares the quantities on the active sales order detail lines, including the quantities for selected lots/bins and serials, and compares these to the relevant quantities on the warehouse and lots/bins/serial tables. will store any differences in a new SQL table (InvSalesQtyBal) which is available to report on.

Release Notes read as follows:

--- Synopsis ---

There is a requirement for the SQL health checks to be made available in a business object so that these can be accessed as part of the general 24/7 health checks

--- Reason for enhancement ---

There is a requirement for the SQL health checks to be made available in a business object so that these can be accessed as part of the general 24/7 health checks

--- Details of enhancement ---

Two new programs have been added - one to migrate the SYSPRO data dictionary to SQL and the second to perform the SQL health checks via business object

--- Where would I see this change? ---

This is currently available from two business objects but will later form part of a Health Check Dashboard

Release Notes read as follows:

--- Synopsis ---

Business object to check whether the on hand quantities against multiple bins, lots and FIFO/LIFO buckets are all in balance with inventory on hand quantities.

--- Reason for enhancement ---

Currently there is no easy way to easily identify whether a module's balance function needs to be run or whether your SQL database is healthy and conforms to SYSPRO's requirements. Because of this the various balance functions and checks are run often (in many cases daily) when they are not actually required. is a requirement to provide a suite of business objects that will quickly identify whether or not there are issues in the data allowing you to establish whether any of the out-of-balance correction functions need to be run. It will also identify whether maintenance is required on your SQL database.

is important to note that these checks will be available to run whilst the system is in use and operators are transacting.

--- Details of enhancement ---

A new business object INVQBL has been written that, in a SQL environment, will sum up the on hand quantities against multiple bins, lots and FIFO/LIFO buckets and compare these with the on hand quantities for each stock code/warehouse combination. differences are found between the on hand quantities, then, where relevant, these are written out to a new SQL table 'InvOnHandBal' which can be reported on.

2016/08/01

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 76709**New Program and Version:** INVP01 (7.0.062)**New Program and Version:** INVQVE (7.0.004)

Release Notes read as follows:

--- Synopsis ---

The balance function in Inventory Period End has been redeveloped to improve the speed of processing when running in SQL.

--- Reason for enhancement ---

A number of customers run the various balance functions on a regular basis as part of a scheduled process. This is due to the fact that the balance function can, depending on the options selected, take a significant amount of time to process.

--- Details of enhancement ---

In line with the development of the balance post business objects that have been created as part of the health check suite of programs the balance functions in Inventory Period End now utilize these business objects to ensure that the checking and, where necessary, any adjustments are performed in as short a time as possible. balance function now utilizes the following business objects: - Business object to check and balance the on hand quantities between warehouse, lots, bins and FIFO buckets - Business object to check and balance the Goods in Transit tables as well as the in transit quantities and values on the warehouse table - Business object to return the inventory valuation

--- Where would I see this change? ---

Running the balance function in Inventory Period End you will notice a significant improvement in the time taken to process the balance function. if adjustments are made the inventory balance report now returns more comprehensive information.

SYSPRO 7 Update 1 Port:017**74536****Perception: 0**

7/29/2016

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 017

Event: 74536**New Program and Version:** DISSTD.WRK (7.0.)**New Program and Version:** MSGDISEN.IMP (7.0.)**New Program and Version:** SORQBL (7.0.000)

Release Notes read as follows:

--- Synopsis ---

Business object to check whether the ship and reserved quantities on sales order detail lines balance with the lots bins and serials attached to that sales order line.

--- Reason for enhancement ---

Currently there is no easy way to identify whether or not the ship or reserved quantities on a sales order detail line balance with the lots, bins and serials that have been selected for that line. If these are not in balance then, at invoicing time, any imbalance between these will have a knock on effect in inventory. able to see imbalances here will allow you to rectify the issue in Sales Order Maintenance before invoicing.

--- Details of enhancement ---

A new business object SORQBL has been written that, in a SQL environment, will compare the ship and reserved quantities on each sales order detail line against the lots, bins and serials that have been selected against that line. differences are found between the quantities on these tables then this information is written out to a new SQL table 'SorDetailQtyBal' which can be reported on. quantities are only compared in instances where lots/bins/serials have been captured for that specific line.

--- Where would I see this change? ---

e.net. This will form part of the health check suite of business objects

Legend:

- 5** - Critical. This could mean that the software will cause an unrecoverable data loss, it may have a serious financial implication to the customer, there may be a security issue, or there may be legal implications.
- 4** - Serious. This means that there is a remote chance of data loss, a remote chance of a financial implication to the customer, or that there is a possibility that it will affect many customers.
- 3** - Error. There is an error in the functionality of the program, but this will not stop the customer doing any major part of their business.
- 2** - Minor Error. There is a minor error in the functionality of the program, and this will not stop a customer doing any part of their business. This is likely to just be a cosmetic problem.
- 1** - Enhancement. This is an enhancement to the system.
- 0** - Ease of use. This may be something that could make life easier for the customer, or a change in the user interface for consistency or to improve usability.
