Event: 75197
New Program and Version: PDFPRINTINGNET.DLL (7.0.)
New Program and Version: SRSP99 (7.0.029)
New Program and Version: SRSPM2 (7.0.020)
New Program and Version: SRSPRT (7.0.069)
New Program and Version: SRSREC02.WRK (7.0.)
New Program and Version: SYSPROMA_WINUI.DLL (7.0.006)
New Program and Version: _EV_75422 (7.0.)
Release Notes read as follows:

--- Synopsis ---
SRS Document Printing - print quality issues with Server Side printing and Thai fonts.
--- Details of Problems Experienced ---
When printing documents from the Server Side printing preview screen the printed Thai characters are not clear enough to
read.This is because the preview control prints the PDF file as a compressed image file which affects Thai characters.
--- Changes Implemented ---
Two new options were added to the Document maintenance program that will allow a user to select to preview the
document using the default PDF viewer instead of the SYSPRO viewer. If this is not selected then the user can elect to
print using a higher quality which will print the document using the Adobe Reader if it has been installed on the client
machine.

79025   **Perception: 3**

11/30/2016
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 021
Event: 79025
New Program and Version: ARSPCN (7.0.015)
Release Notes read as follows:

--- Synopsis ---
When you ran the AR Customer Code conversion program there was no validation for the maximum number of characters allowed for a new customer code.

--- Details of Problems Experienced ---
When you ran the AR Customer Code conversion program there was no validation for the maximum number of characters allowed for a new customer code. caused issues when maintaining the new customer code using the AR Customer maintenance program as it exceeded the maximum length and did not allow you to save changes made to the new customer code.

--- Changes Implemented ---
When you now run the AR Customer Code Conversion program it will validate the maximum character allowed for a new customer code and will not validate if the customer code is incorrect.

79013   **Perception: 3**

2016/12/02
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 021
Event: 79013
New Program and Version: _EV_78820 (7.0.)
Release Notes read as follows:

--- Synopsis ---
POS: Invoice total and take payment total(take payment comments as well) is different

--- Details of Problems Experienced ---
When accumulate line qty is switched on in POS and a stockcode is added and a discount provided by maintaining the line if the stockcode is added again the discount will displayed but will be zeroed out in the background which causes the take payment amount to be too much. also causes the payment comments to be different from the invoice total.

--- Changes Implemented ---
The program has been changed so that discounts will not be zeroed out when adding more of the same stock code. :
Please note accumulate line qty only works properly on the normal POS screen at this stage. We are working on getting it fixed on the other screens as soon as possible.

New Program and Version: REPORT05.WRK (7.0.)
New Program and Version: TOOLBR9.WRK (7.0.)
New Program and Version: XTPPROP.WRK (7.0.)
Release Notes read as follows:

--- Synopsis ---

Implementation of Web Views.

--- Changes Implemented ---

Implementation of Web Views. views are available in the SYSPRO 7 product and can be either automatically applied to an application (using SYSPRO's standard views as shipped in the SAMPLES folder), or can be designed using the Visual Designer (found within the Application Designer). Web View is a self-contained HTML5 page that may contain Fields (as derived from SYSPRO's Form fields), Charts (as derived from SYSPRO's charts) and Cards, and is embedded in a docking pane forming part of the docking layout. Web Card is a self-contained HTML5 page whose data is derived from a business object. A Card may run as a separate entity in its own window or can be embedded in a web view. A card may require a 'key value' (such as a Customer or Stock code key) to execute ('key cards'), whereas other cards require no such key - the latter are known as 'Insight cards' (an example might be 'Bank balances', or 'Sales order commitments'). enable web views to be automatically applied to an application, call up IMPFRB and check the option 'Enable standard web views'.

Event: 75913
New Program and Version: SYSPROREPORTINGSERVICES.EXE (7.0.037)
New Program and Version: SYSPROREPORTINGSERVICES2013.EXE (7.0.007)
New Program and Version: SYSPROREPORTINGSERVICESSERVER.EXE (7.0.024)
New Program and Version: _EV_75949 (7.0.)
Release Notes read as follows:

--- Synopsis ---
1. User could not set a custom schedule name as it was being over-written with an auto-generated name. 2. Changing start date for existing run-once scheduled tasks are not correctly updating Windows

--- Details of Problems Experienced ---
1. User could not set a custom schedule name as it was being over-written with an auto-generated name. 2. Changing start date for existing run-once scheduled tasks are not correctly updating Windows Task Scheduler. 3. When double-clicking on the report treeview, report gets added to task list but auto-generated name does not update. This is inconsistent with clicking the Add button directly. 4. Inconsistencies noted between SRS UI & Windows Task Scheduler start dates for daily, weekly, & monthly schedules. Start date was not being passed to Windows Task Scheduler, so users could not future date tasks, although SRS UI indicated they were doing this successfully. 5. When editing a recurring schedule, SRS UI does not display start date for the recurrence, but displays start date for specific occurrence being edited. This makes it difficult for user to understand the effect of their changes.

--- Changes Implemented ---
1. It now detects when the user has set a custom name & will not overwrite it. 2. The date is now passed to Windows Task Scheduler. When an existing task is edited, date changes are correctly applied. 3. Double-clicking the report treeview behaves the same as clicking the Add button. 4. The other issues are related to the start date field being passed to Windows Task Scheduler for recurring schedules. This was corrected & start dates for tasks are correctly applied. This allows users to correctly create future dated scheduled tasks. 5. When editing an existing recurring task, the user now sees the originally entered start & end dates for the entire recurring pattern, irrespective of which occurrence they edit.

SYSPRO 7 Update 1 Port:021

75572   **Perception: 3**

22/11/2016

New Program and Version: _EV_75949 (7.0.)
New Program and Version: _EV_77498 (7.0.)
Release Notes read as follows:
--- Synopsis ---
SRS Documents cannot be printed using a SQL driver.
--- Details of Problems Experienced ---
When printing a SRS Document the document is printed using the XML driver which is slow on large batches.The XML driver also makes use of JAVA on the machine that generates the document and if multiple sessions are active at the same time then this can take up all of the CPU on the machine.
--- Changes Implemented ---
SRS Document printing has been changed to add an option to enable the SQL driver at the document level.This option is available in the document maintenance program when client or server side printing with the SQL driver has been selected in the system setup.The user will have to check each template file for formulas that could work differently when using the SQL driver, for example, the ISNULL check will behave differently with the SQL driver as the column value will not be NULL.

SYSPRO 7 Update 1 Port:021

79050   **Perception: 2**

11/30/2016
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 021
Event: 79050
New Program and Version: DDSBFD (7.0.014)
Release Notes read as follows:

--- Synopsis ---

When you used the data dictionary viewer to view data in a table where a date is the first primary key field and click 'Last Entry' you received a SQL error message that '99991231' is not a valid date

--- Details of Problems Experienced ---

When you used the data dictionary viewer to view data in a table where a date is the first primary key field and you clicked 'Last Entry', you received a SQL error message that '99991231' is not a valid date. may notice that the message is preceded by '[SYSPRO]' - this indicates that this is a parameter validation message provided from a SYSPRO program and not a SQL Server or ODBC message. that even if you receive this error message you can still continue to browse your data using the generic data dictionary utility.

--- Changes Implemented ---

The Data Dictionary Viewer program (DDSBFI calling DDSBFD) has been updated to use an alternate date as the highest possible date when clicking on the 'Last Entry' button.

78874   **Perception: 2**

11/8/2016
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 021
Event: 78874
New Program and Version: COMFGB (7.0.008)
New Program and Version: ESPQRY (7.0.017)
Release Notes read as follows:

--- Synopsis ---
Optimizing the Predictive Search.
--- Details of Problems Experienced ---
When you do a predictive search, the system in the background would generate a file with the search criteria. It would then send a request off to the program that does the query. The problem, even though it was a minor one, was that the system used a file to send the criteria across.

--- Changes Implemented ---
The infrastructure has been updated to pass an object from one program to the other instead of a file. This will improve the performance of the program as it no long has to access the disk.

78849   **Perception: 2**

78428   **Perception: 2**

12/5/2016
Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 021
Event: 78428
New Program and Version: ADMSYSES.MAM (7.0.)
New Program and Version: COMQES (7.0.008)
New Program and Version: ESIG_LOG (7.0.001)
New Program and Version: IMPTRV (7.0.014)
Release Notes read as follows:

--- Synopsis ---

Electronic Signatures - The query and the report had different filter options and there was no paging in the query

--- Details of Problems Experienced ---

When running the Electronic Signatures Query and the Electronic Signatures report you could filter on different fields. Also it was possible for the Query program to try and load more rows than the listview could handle, thus preventing the user from seeing all of the rows that match the filter selection.

--- Changes Implemented ---

The Electronic Signatures Query and Report have been changed to support the same set of filters which is the combined set of all the filters that were available to both programs. options have been added to the Electronic Signatures Query program to enabled a user to page up and down the rows matching the filter selection. The paging options are only available if the user has not selected to view all rows.

Release Notes for SYSPRO 7 Update 1 Port 021
Event: 77159
New Program and Version: IMPSQM (7.0.036)
New Program and Version: POSQRY (7.0.012)
New Program and Version: SRSP05 (7.0.003)
Release Notes read as follows:

--- Synopsis ---
There is a requirement to cater for company specific SQL Bulk Insert Code pages. Up to now the Bulk Insert Code Page has been system-wide.

--- Details of Problems Experienced ---
There is a requirement to cater for company specific SQL Bulk Insert Code pages. Up to now the Bulk Insert Code Page has been system-wide. Customers have reported that bulk inserting data based on system-wide values can potentially fail if different companies have databases with different bulk insert codepages.

--- Changes Implemented ---
A field - IM0-SA-CODEPAGE - has been created that is saved per company. If it is non-spaces [which is still being stored in ADMSYSSS-SA-CODE-5], it will be used in place of the system-wide value. following programs have been amended to cater for a company sepcific Bulk Insert codepage:
"IMPNCO - Add New Company Wizard"
"IMPSQM - SQL Copy Functions"
"SRSP05 - SRS Document Archiving ISAM to SQL Conv"

Release Notes read as follows:
--- Synopsis ---
Provide a modern User Interface and User Experiance for applications in SYSPRO 7.
--- Reason for enhancement ---
There is a requirement to provide a modern User Interface and User Experience for applications within SYSPRO. The default layout of applications in the current version of SYSPRO are a bit cluttered and do not answer the questions that most users ask when using the application. The information on some of the screens are not grouped in a logical sequence and there is information i.e. metrics missing.
--- Details of enhancement ---
The introduction of "Web views" aim to provide a modern User Interface/Experience. views consist of various different components: 1. New options in System Wide Personalization (IMPFRB) - There is a new option "Enable Standard Web views" in IMPFRB. Once this option is turned on, and a user goes into a program, the system will do a check to see if there is a "Standard Web view". If there is one, the system will load the "Standard Web View". 2. There has been a number of Web views released for some query applications in SYSPRO. If you do go into an application and a Web view is not shown, this simply mean that there is no standard web view at this point in time for the application. You can either create your own Web view using the Visual Designer or you can wait for the Standard Web view to be released. Web views will be released in SYSPRO ports on a regular basis. Web views themselves have been carefully thought-out with the aid of the Product Management team. Extensive research into what customers expect to see when opening up an application has been done. The user experience team then designed the UI based on the information provided by Product

Management. Web views do not use Windows Forms controls, instead HTML 5 has been introduced as an underlying technology to improve the user interface and experience of the application. 3. Along with Web views, Cards have also been introduced to once again improve the user experience and give the user a consist view of key fields. A card is a standalone piece of business logic that is built specifically around key fields i.e. Customers, Suppliers, StockCode, etc. Cards have also been generated for aspects in SYSRPO that do not require a key fields, i.e. Inventory Valuation chart, Bank Balance Chart, etc. Cards and be inserted and have been inserted into Web views. Cards get their information from a business object, it calls the business object on a separate thread, by doing this it enhances the user experience and the user is not left with a "wait icon" for long running processors. Web views on the other hand get their information for the standard SYSPRO screen. Cards can be engaged by clicking on certain key fields in a Web view or by clicking on a smart tag then selecting the card. If you close the application the card will automatically be closed. If you would like to keep the card open through-out the run of SYSPRO you can pin the card, and the information on the card will be updated as soon a the key field related to the card is updated. You can also have has many cards open at the same time as you like.
. Visual Designer - In the first iteration of the Web views, the Visual designer has not been documented. Although 90% of the development has been done, there are still a stability items that still needs to be addressed. The Visual Designer will be documented and 100% supported in the February 2017 port.
--- Where would I see this change? ---
There is an option in the System wide personalization screen called "Enable Standard Web Views" that can be activiated. Once this option has been activated, the changes can be seen in a number of query applications. Once you open the application a new pane is added to the application. The pane will contain the webview. Once in the webview, users will find clickable links that allow them to drill down into the detail that makes up the value. Users can also click on a key field and choose to show a card, the card can be pinned downed and will be updated when the keyfield of that card is changed/updated.

Business object to compare and balance ship and reserved quantities on a sales order detail line and it's associated lots, bins and serials.
--- Reason for enhancement ---
Currently the corrections for balancing issues requires you to run the balancing functions in the relevant modules and most of these take a substantial amount of time and process functions which are actually not necessary (for example the calculation of inventory valuation in the inventory balance function). is therefore a requirement to provide a suite of business objects that will quickly correct, where possible, balancing issues found by the health check queries.
--- Details of enhancement ---
A new business object, SORTBL, has been written which, in a SQL environment, will correct out-of-balance issues between the Sales order detail lines and it's associated lots, bins and serials. object appliies the same corrections to the sales order detail line quantities as is performed by the Balance function in the Sales Order Purge.
--- Where would I see this change? ---
This will form part of the health check suite of business objects and will also be integrated into the Sales Order Purge program in SYSPRO.

Ported for SYSPRO 7
Release Notes for SYSPRO 7 Update 1 Port 021
Event: 77336
New Program and Version: INTP20 (7.0.010)
Release Notes read as follows:

--- Synopsis ---
New UI (user interface) for the 'Interface Export' program.
--- Reason for enhancement ---
A new look and feel was needed for the 'Interface Export' program to provide a more user friendly UI.
--- Details of enhancement ---
Two list views have been added to display the 'Last export' or 'Export log' for the current company site. The list views are populated immediately after pushing either the 'Last export' or 'Export log' buttons respectively on the new toolbar. These two buttons are only activated once a single site has been selected/entered and validated. The 'Last export' list view updates the status and group number of the current files being exported. Statuses include: Exporting - for the files currently being exported; Exported - for files that were exported with the current/latest group; None exported â€" for files that were selected for export but did not.
--- Where would I see this change? ---
The changes are visible when you load the 'Interface Export' program within SYSPRO.

Event: 75949
New Program and Version: COMSET (7.0.012)
New Program and Version: SRSRASSCHEMA.SQL (7.0.)
New Program and Version: SRSUPDATE4.SQL (7.0.)
New Program and Version: SYSPROREPORTINGHOSTSERVICE.EXE (7.0.017)
New Program and Version: SYSPROREPORTINGHOSTSERVICE2013.EXE (7.0.003)
New Program and Version: SYSPROSRSSERVER.DLL (7.0.008)
Release Notes read as follows:

--- Synopsis ---
Enhancement to SRS Server Side Reporting to improve scalability and resolve threading issues when processing high volume of reports on the reporting server.
--- Reason for enhancement ---
The host service uses two RAS Services and this affects how long it will take to produce a report when processing high volumes of reports. The service should be able to produce online documents much a quicker.
--- Where would I see this change? ---
This will be in the reporting host service for Crystal 2008 and crystal 2013. So you will need to have Server Side reporting switched on. In the System wide db for SYSPRO, there is a new table called SrsRasServer which stores a list of RAS Servces beig use by the Host Service. SRSReportQueue and SRSDocumentQueue Tables have been upgraded with 4 new columns to store information like RASServername, RASPortNumber, XMLOutSize and ReportWorkflowPath.

SYSPRO 7 Update 1 Port:021

Legend:

5 - Critical. This could mean that the software will cause an unrecoverable data loss, it may have a serious financial implication to the customer, there may be a security issue, or there may be legal implications.

4 - Serious. This means that there is a remote chance of data loss, a remote chance of a financial implication to the customer, or that there is a possibility that it will affect many customers.

3 - Error. There is an error in the functionality of the program, but this will not stop the customer doing any major part of their business.

2 - Minor Error. There is a minor error in the functionality of the program, and this will not stop a customer doing any part of their business. This is likely to just be a cosmetic problem.

1 - Enhancement. This is an enhancement to the system.

0 - Ease of use. This may be something that could make life easier for the customer, or a change in the user interface for consistency or to improve usability.
