**New Program and Version:** IMPFRB (7.0.029)

**New Program and Version:** IMPFRO (7.0.209)

**New Program and Version:** IMPMEN (7.0.192)

Release Notes read as follows:

**--- Synopsis ---**

SYSPRO can sometimes crash if there are large volumes of rows to be displayed in a list view.

**--- Changes Implemented ---**

The System-Wide Personalization program now allows you to specify the threshold limit for number of rows to be displayed, and what you would like the system do to when that threshold has been reached. options are:

"Threshold limit for returned rows" non-zero value defines the maximum number of rows to display before the threshold option applies. : This threshold does not apply to editable datagrids.

"Threshold option" what to do when the threshold limit has been reached. options are:

. Give a warning message to the operator when the threshold has been reached, but to continue to add all the rows. The warning message will only be given once.

. Ask the operator whether to continue adding all the rows. The question will only be requested once.

. Automatically stop adding any further rows.

Release Notes for SYSPRO 7 Update 1 Port 028

**Event:** 82127**New Program and Version:** TPMP35 (7.0.024)

Release Notes read as follows:

**--- Synopsis ---**

When doing a Reclassify in TPM Deduction Review, all customers are listed in the lookup, not just the sub accounts of the master account the reclassify is being done for.

**--- Details of Problems Experienced ---**

When you do a reclassify on a specific deduction and click the browse button under the Customer column, the Customer Browse program is called instead of the Master Sub-Accounts.

**--- Changes Implemented ---**

The TPM Deduction Review program has been updated to ensure that it now calls the Master Sub-Accounts program when clicking the Browse button under the customer column when doing a reclassify.

Release Notes read as follows:

**--- Synopsis ---**

Web view changes.

**--- Changes Implemented ---**

Previously, an application was allowed to have one web view per docking layout, and you could use the Application Designer to design which web view you wished to design, but this architecture is not suitable for Project Fusion in a web-based version of SYSPRO. So, this capability has been removed and you can now only have one Web View per application. This web view is assumed to be associated with the docking layout name suffixed by "LZ". Thus, you can have a web view in IMPMEN that's embedded in IMPMENLZ's layout. This simplifies the underlying architecture, and in particular makes it easier for the user to design and edit web views for any application. So, when you click on the SETTINGS button you will no longer see the menu option Application Designer: instead, this has been replaced with the option Design Web View or Edit Web View (if there's already a web view). This will take you straight into the Visual Designer, which has been modified as follows:

? The BACK and SAVE AS buttons have been removed.

? The status bar has been removed

? The window title now reflects the wording "Visual Designer".

. Because of the above change, and when you're in the Visual Designer, all fields for all forms are available regardless of which docking layout the forms are associated with.

. In the Visual Designer all toolbar items in all toolbars in an application are available to be added to a web view toolbar.

Toolbar items are shown grouped together in 'Toolbar Groups'.

. The CARDS are now presented in sorted sequence (and without duplicates) in the Visual Designer.

Release Notes read as follows:

**--- Synopsis ---**

Using script to make a field hidden or visible can cause field properties in the VBScript not to be applied correctly.

**--- Details of Problems Experienced ---**

If you use VBScript to make a form field visible or hidden, and also change other field properties at the same time, then it's possible that the other field properties are applied to the incorrect form field. The following example, when the document type field in IMP040's Order Header is changed, then the following script makes two fields visible or hidden, but in addition adds a button to the form field. Case OrderHeader.CodeObject.DocumentType

Case "S" ' S - Scheduled order

OrderHeader.CodeObject.Field2 ="Open "

OrderHeader.CodeObject.Field3 =" "

Case Else

OrderHeader.CodeObject.Field2 =" "

OrderHeader.CodeObject.Field3 =" "

End Select Function a form field currently has focus when this script executes, then the BUTTON 'Open' will be added to the currently focused field rather than the intended one on the script.

**--- Changes Implemented ---**

The system has been corrected to apply field changed properties to the current form field.

Release Notes read as follows:

**--- Synopsis ---**

1. There was a requirement for the List of Master Sub-Accounts report to include a customer list and to be SQL optimized.

**--- Details of Problems Experienced ---**

1. There was a requirement for the List of Master Sub-Accounts report to include a customer list and to be SQL optimized.  
2. The logic used to parse FilterType and FilterValue XML input to Query Business objects was inconsistent. This could lead to inconsistent behavior between business objects and made the system difficult to enhance in future.

**--- Changes Implemented ---**

1. The List of Master Sub-Accounts report now includes a customer list option and is now SQL optimized. 2. The XML parsing logic used to handle FilterType and FilterValue attributes has been changed to be more consistent. This change will have no effect on existing query business objects but allows for future improvements.

Release Notes read as follows:

**--- Synopsis ---**

The Toast Notification message appears for a few seconds and then disappears, and sometimes you can miss the message because it closes too quickly.

**--- Changes Implemented ---**

Toast Notifications have been improved in a number of ways (please use System-Wide Personalization to set these new options):

. The option 'Enable Toast Notifications' has been separated out from the 'Enable Task Dialog Customizations' option. By default, if you have previously switched on Enable Task Dialog Customizations then Toast Notifications will be automatically assumed. When next you launch System-Wide Personalization you will have to then specifically select to Enable Toast Notifications.

. A toast notification appears for 4 seconds. You can now change this delay to be anything up to 2 minutes using the option 'Toast Notifications delay'.

. If a Toast Notification is 'open' (that is, displayed), then as soon as you start typing into a form field or into a toolbar entry field then the toast notification is closed. In addition, when you exit an application then an open toast notification is closed. can prevent this behaviour by switching off the option 'Close Toast Notification when typing'. This then leaves the Toast Notification displayed on screen until another notification is displayed or the notification delay period has expired.

Release Notes for SYSPRO 7 Update 1 Port 028

**Event:** 80297**New Program and Version:** IMPFR2 (7.0.098)**New Program and Version:** IMPFRO (7.0.209)

Release Notes read as follows:

**--- Synopsis ---**

There is an enhancement request to allow a form field to be changed (using VBScript) to have a LIST of drop down items, and to allow to select from that list or to enter a value.

**--- Changes Implemented ---**

The system has been enhanced to allow the AllowEntry='true' syntax to be entered into a VBScript: is a form field on the Sales Order Entry 'Order Header' form called DropDownField to have a list AND be editable: .CodeObject.DropDownField = " ", in the Field Properties in the VBScript editor there is a new checkbox property 'Allow drop down entry' that will inject the " AllowEntry='true' " statement. AllowEntry can also be 'false', indicating the list cannot be editable and you have to select from the drop down list.

**79956****Perception: 3**

2017/08/03

Ported for SYSPRO 7

Release Notes for SYSPRO 7 Update 1 Port 028

**Event:** 79956**New Program and Version:** IMPFRO (7.0.209)

Release Notes read as follows:

**--- Synopsis ---**

Custom columns for the Warehouse custom form type are not being populated in list views that contain a WAREHOUSE column but do not contain a STOCK CODE column.

**--- Details of Problems Experienced ---**

Custom columns for the Warehouse custom form type are not being populated in list views that contain a WAREHOUSE column but do not contain a STOCK CODE column. As an example the associated pane 'Warehouses' does not work correctly for the Warehouse custom form type in the Inventory Query.

**--- Changes Implemented ---**

This problem can be seen in the associated pane 'Warehouses' for a stock code. Typically the custom column values are derived from keys found in the list view columns. But sometimes list views do not contain the STOCK CODE column and therefore the custom form values cannot be determined for a Warehouse custom type. resolve this the system has been changed so that if a STOCK CODE column cannot be found in the current list view columns, then the system will search for 'stock code' in the forms for the current application and apply that value if found.

Release Notes read as follows:

**--- Synopsis ---**

The webviews framework needs to be updated to better support tiles, cards and other changes

**--- Details of Problems Experienced ---**

The webviews framework needs to be updated to better support tiles, cards and other changes that have been made in core SYSPRO such as grid lists. SYSPRO Harmony also required some changes in the Web View infrastructure to work correctly. Finally some translation in cards and the infrastructure itself needed to be added.

**--- Changes Implemented ---**

Adding and removing of Tiles in the Visual Designer caused errors which should largely be fixed. Tiles Shows US Profit Margin when loading so I have changed this to Loading and the tiles name. for Follow and Unfollow for Harmony inside of SYSPRO. large amount of new functionality has been added (although not technically supported yet) which will allow Web Views to run in a browser such as grid lists, off canvases and toolbars. crucially entry forms are now supported more fully along with toolbars. the View Data that appears below a chart. Translated Toolbar Buttons that weren't being translated. Translated Links in lists of links. Translated Chart Titles. Translation in various places in Customer and Supplier Cards.

Release Notes for SYSPRO 7 Update 1 Port 028

**Event:** 74184**New Program and Version:** IMPFRA (7.0.011)**New Program and Version:** IMPFRO (7.0.209)

Release Notes read as follows:

**--- Synopsis ---**

Customers would like a more efficient way to show or hide field captions on SYSPRO screens. Users would like a faster means of hiding captions for fields that are not needed for them.

**--- Details of Problems Experienced ---**

Customers would like a more efficient way to show or hide field captions on SYSPRO screens. Users would like a faster means of hiding captions for fields that are not needed for them. Currently this can only be accomplished by selecting each field individually.

**--- Changes Implemented ---**

This is an enhancement to allow administrators to hide a field across all forms. To do this, right-click on any form and select Field Properties for All Forms... (or just call the program IMPFRA). Enter the caption that you would like 'hidden' and select the check mark 'Hide field'. example, if you would like the LOCALITY field hidden across all forms, then enter Locality (the wording is not case-sensitive) and click the 'Hide field' option. Save and exit IMPFRA and when you next launch SYSPRO that field will be hidden for all users across all forms.

Release Notes read as follows:

**--- Synopsis ---**

It is not possible to cancel the effect of the VBScript OnDbClick event as we can with the OnSubmit event.

**--- Changes Implemented ---**

You can now set the OnDbClick function to be 'false' using the following syntax: SalesOrderLinesCapture\_OnDbClick()  
SalesOrderLinesCapture\_OnDbClick = false  
Function : For this syntax to work correctly, the program in which you wish to use this syntax must have been recompiled and ported by SYSPRO development. If you attempt to use the above syntax in a program not yet recompiled/ported then an error message will be displayed indicating 'This program does not support being able to cancel the effects of the OnDbClick event'.

Release Notes read as follows:

**--- Synopsis ---**

Business object to correct SYSPRO Database issues

**--- Reason for enhancement ---**

In SYSPRO there is a SQL Server Diagnostic utility that can be used to highlight issues within a SYSPRO database (for example a missing table) however many of these issues need to be corrected manually within SQL itself this is both risky and prone to error. is therefore a need for a utility that can be used to rectify issues within a SYSPRO database automatically.

**--- Details of enhancement ---**

A new business object has been added as part of the Health Check Correction suite of objects that allows you to correct most issues that commonly can occur within a SYSPRO database. The business object can be used to correct the following: table missing column missing definition does not match SYSPRO definition defined column not nullable and has no default constraint (will set to nullable) custom form table missing form column definition does not match SYSPRO definition defined custom form column not nullable and has no default constraint (will set to nullable) index missing column mismatch (index will be dropped and recreated) defined against incorrect table (index will be dropped against that table and added to the correct table) defined primary key (primary key will be dropped and standard primary key will be added) custom form index missing form index mismatch (index will be dropped and recreated) form index defined against incorrect table (index will be dropped and added to correct table) foreign key missing foreign key is enabled (this will be disabled) key defined against incorrect table (will be dropped and added to correct table(s)) key column mismatch (will be dropped and recreated)

**--- Where would I see this change? ---**

This will form part of the health check suite of business objects and will also be added to the SQL Server Diagnostic utility in SYSPRO in a future release.

## SYSPRO 7 Update 1 Port:028

### Legend:

- 5** - Critical. This could mean that the software will cause an unrecoverable data loss, it may have a serious financial implication to the customer, there may be a security issue, or there may be legal implications.
- 4** - Serious. This means that there is a remote chance of data loss, a remote chance of a financial implication to the customer, or that there is a possibility that it will affect many customers.
- 3** - Error. There is an error in the functionality of the program, but this will not stop the customer doing any major part of their business.
- 2** - Minor Error. There is a minor error in the functionality of the program, and this will not stop a customer doing any part of their business. This is likely to just be a cosmetic problem.
- 1** - Enhancement. This is an enhancement to the system.
- 0** - Ease of use. This may be something that could make life easier for the customer, or a change in the user interface for consistency or to improve usability.
